Trip Report	
Place:	
Contract: Study of Non-Reversible Recording Material	
Date of visit: 13 August 1964	
This was the initial visit since award of the contract on 20 June 1964. Contact was made with	25X1
The program is directed towards development of a negative-working dry-processed photographic material for producing first generation positive transparencies from original negatives. Work is now underway in a separate area that is being fully equipped to accomplish the programmed work. The program is under the general direction of	25X1
Physical Chemist. Most work is being carried on by I PhD in Physical Chemistry. He is supported by consultation with PhD in Organic Chemistry who specializes in synthesis of organic structures and M.S. in Organic Chemistry who	25X1
will assist in establishing the performance perameters of dye structures to accomplish the objectives. and perform the laboratory work.	25X1
Presently commerical dyes are being tested to first, determine what is available and second, for correlation of molecular structures and color formation in order to provide guidelines for the synthetic structures. After certain parameters have been established, they will attempt to synthesize dyes and other necessary components of a composite system to achieve the desired results.	٠.
system to achieve the desired results.	25X1

Evoluted from exhometic deservations and deservations
